

Broadband over power lines is a bad idea. There is no question as to whether it will cause interference on radio frequency band currently used for government, private and commercial use, it's a known fact that it will. Please listen to the advice of the NTIA and tread very carefully. Don't be in a hurry to reap the billions of dollars that stand to be collected from selling off the rights to use already used frequencies. Please reconsider your decision to move ahead with the NPRM. This matter should never have gotten this far. Due diligence has not been done with respect to assessing BPL's detrimental impact on existing service.
